

FITTING INSTRUCTIONS FOR DOOR LOCK KNOBS

These Door Lock Knobs are precision re-manufactured to exact Original Manufacturers Specifications. They are PLASTIC, which is exactly how they were supplied on the car originally.

All the Door Lock Knobs we supply are BRAND NEW. As a Brand New Lock Knob it does not have the thread pre-cut into it (again as per original).

The metal lock rod thread is specifically designed to cut the thread into the plastic knob as you screw it on for the first time.

From previous experience it has been found you may have to have several goes, screwing on and removing the knob several times to clear the plastic residue from the metal thread of the lock rod, and the knob.

PLEASE NOTE: Some effort is required.
